# Data Solutions for Operations and Building Performance

Tuesday, July 12, 2022

Buildings can generate a lot of data that's only useful if building managers can translate it into meaningful actions. This session highlighted innovative solutions that manage and process data, interface with operations teams and leads to measurable performance improvements.

Watch the webinar here

Top takeaways:

Facilio's RealEstate LifeCycle Suite: An AI-powered property operations platform that enables owners and operators to gather building data, optimize performance, and govern portfolio operations.

Graybar Canada Trellix All-in-One Lighting Controls Platform: Leverages the data generated by your WaveLinx sensors and connected luminaires to deliver meaningful and actionable insights for business owners and building owners/operators.

Audette Carbon Reduction Plan: Using a 'surrogate modelling' approach to fit high-resolution digital retrofit models address by address to plan community-scale retrofit strategies and perform capital planning for decarbonization.

RYCOM Data Analytics and FDD (Fault Detection and Diagnostics) platform: A smart solution that acts as an extension of a building's Operations Team, leveraging building data to identify opportunities, optimize system performance and generate useful insights.
