

# Annual Global Adjustment Workshop

**Friday, April 28, 2023**

Led by industry experts, practitioners and policy makers, this session was designed to help attendees make informed decisions and determine the best strategy going forward for annual reporting requirements. On June 15th yearly, Ontario electricity customers with average monthly demand over 1,000 kW must choose their specific GAM rate structure.

Watch the webinar [here](#)

## Top takeaways:

**Choose your GAM Strategy for this year:**

**Decision #1:** Class A or B notify your LDC of your decision by June 15

**Decision #2:** How to be prepared for 2024? (June 16)

### Ontario Ministry of Energy

- **Industrial Conservation Initiative (ICI)** is going ahead as planned for summer, 2023
- **Minor amendments are being considered for participants** in very specific circumstances, including those who add new connection points to the same facility, or purchase power from outside of Ontario.

### Energy@Work

- **Decision 1:** opt into A or B by the June 15th Deadline. Class A is not always best. Conduct an analysis with multiple scenarios to aid in your decision.
- **Decision 2 after June 15th:** develop a plan and don't get caught off-guard.
- **As the GA drops and the HOEP rises,** kWh reduction becomes more important for both Class A and B customers.

### Ontario Energy Board

- **The OEB is the independent regulator of electricity systems** that provides guidance to distributors and is responsible for enforcing regulations on how the GA Regulation should be interpreted.
- **OEB has** provided guidance to the sector on issues of Class A eligibility, including; aggregation of loads, Class A status and CDM program participation. For questions and clarification, contact: [IndustryRelations@oeb.ca](mailto:IndustryRelations@oeb.ca).

### Independent Electricity System Operator (IESO)

- **It's important to make your opt-in/opt-out decision by June 15** for the Industrial Conservation Initiative.
- **Retrofit custom tracking being reintroduced May 17,** major increase in incentives.
- **Midstream lighting is being introduced in late 2023.** Incentives will be at point of purchase. Will be discontinued in the Retrofit program.
